Points	Scoresheet for System Requirements Specification Document
5	Introduction with a description of your embedded system
	purpose
	objectives
7	A block diagram showing the systems major elements
	inputs, outputs, connections
17	A list of requirements (each with a number, e.g., Req. 1)
	implementation independent
	traceable to specific documented customer statement of need
	means to prove that the system satisfies the requirement
7	A verification and validation plan
	validate that your system meets each of the requirements
5	A timeline for the project with weekly milestones
41	Total

Comments: Block diagram shows antenna connected to MCU, only 1 SPI and 1 TWI on Atmeg

ga328P, verification plan needs to be specific to each requirement, some requirements are ambiguous (

e.g., watchdog timeouts, power supply, battery backup, speaker characteristics),
